We aim to use environment-friendly and energy-efficient methods at every stage of our activities and services while designing and manufacturing seat systems and interiors to the highest standards for the automotive industry. The expectations of interested parties, especially our customers, are the key driving force to define our standards.

OBJECTIVES;

- To organize and design all of our activities to prevent the environmental accidents and minimize the environmental pollution.
- To minimize and/or eliminate the potential environmental impacts of our products and production activities. This includes ensuring the preservation of biodiversity, reduction of greenhouse gases emission, enhancing air quality and emission control, preventing waste generation, managing hazardous materials and chemical use, and improving water consumption and water quality.
- To assess and manage the potential environmental impacts of our products throughout their lifecycle, from design to production and disposal stages, and to reduce these impacts by developing eco-friendly products.
- To carry out activities with the aim of minimizing greenhouse gas emissions, by evaluating climate-related risks and opportunities in addressing climate change.
- To continuously monitor and improve environmental and energy performance.
- Transition from using conventional energy sources to renewable ones.
- To prioritize the adoption of environmentally friendly and energy-efficient production methods or innovative technologies.
- To reduce and/or optimize the usage of energy, water, natural resources, and chemicals by utilizing the best available techniques or clean production technologies.
- To adopt the principles of a circular economy to minimize waste generation, increase reuse and recycling rates.
- To integrate an environmentally friendly mindset into the core of the company culture by raising awareness on resource efficiency, energy conservation, and environmental impacts.
- To guide and encourage our suppliers to conduct their activities with an environmentally friendly perspective and to improve and enhance their environmental performance.

COMMITMENTS;

- To provide all necessary information and resources to achieve the goals and the objectives set for environmental protection and energy efficiency.
- To comply with all relevant national and international legal requirements, as well as the compliance obligations of interested parties.
- To ensure the continuous improvement of our environmental and energy management system by enhancing the effectiveness of our activities through employee participation and consultation.
- To prevent any living organism from being negatively affected by our products and activities.
